BookMatch – Eisenhower Matrix

Do – (Your MVP)

- Allow users to add books with titles, authors, and genres
- Allow users to rate books out of 5 stars
- Organize books into Read, Currently Reading, and Want to Read lists
- Search and filter books by title, author, or genre

Schedule – (For V2.0+)

- Create user accounts and login functionality
- Add more advanced personalized book recommendations
- Track daily reading progress and reading streaks
- Allow users to share book recommendations with friends

Delegate – (Use a Library)

- Use Google Books API to retrieve book information and cover images
- Use Tkinter to create the application window and interface
- Use JSON libraries to save and load book information
- Use a library for interactive star ratings if needed

Delete – (Cut It)

- Build an AI chatbot for book recommendations
- Create a subscription or payment system
- Add an online bookstore for purchasing books
- Create a social media feed for readers
